

This is exactly what you're scored on. Each criterion is scored **1–5** from your 4-minute demo, then weighted. **Use of Jac** is worth double any other criterion.

REQUIRED TO WIN

You must meaningfully use Jac to qualify for any track or any prize. That means scoring at least a **3** on Use of Jac.

01 Use of Jac

40%

Is Jac doing real work at the center of your project?

1 PERIPHERAL

Jac is bolted on, boilerplate, or barely touched. The product would work the same without it.

NOT ELIGIBLE FOR PRIZES

3 MEANINGFUL

Real logic lives in Jac and drives part of your main workflow, not just a thin wrapper around another stack.

MINIMUM TO QUALIFY

5 CENTRAL

The product depends on Jac, used with depth or originality: walkers, graph traversal, byLLM, agentic flows.

Be ready to show where Jac runs. Point to it in your repo or your demo, don't just say it. The highest score here also wins the **Best JacHammer** award.

02 Real-World Use Case 20%

Would someone outside this room actually use it?

1 UNCLEAR

Hard to name the user or the problem being solved.

3 CLEAR

Real user, real problem, credible value.

5 COMPELLING

A problem worth solving, and a convincing way to solve it.

Name one person, not a market. A narrow, focused problem can earn a 5.

03 Technical Execution 20%

How much did you build, and how well does it hold up?

1 THIN

Mostly scaffolding, templates, or hand-waving.

3 SOLID

A real build with the hard part genuinely done.

5 IMPRESSIVE

Ambitious scope, cleanly pulled off in one day.

You're judged against one day of building, not a funded roadmap.

04 Demo & Story 20%

Did you show the core product working, end to end?

1 INCOMPLETE

Slides, mockups, or a workflow that never runs.

3 FUNCTIONAL

Main flow runs start to finish, rough edges and all.

5 CONVINCING

Complete, clear, and demoed with real evidence.

A working demo beats a deck. You're scored on what you show, not what you promise.
